

## Terra Lana Insulation Product Range

### Terra Lana Ceiling and Wall

Designed for ceilings and external walls of homes and commercial buildings, Terra Lana ceiling and wall insulation is available in a range of thicknesses, widths and R values to suit your region and the building's construction type. Typical dimensions are available at [www.terralana.co.nz](http://www.terralana.co.nz) or from our office ph 0800 485 262. If necessary you can ask to have product manufactured to your own measurements, in roll or slab form.

### Terra Lana Chatterblock®

Designed for internal or inter tenancy walls where there is less cavity space and where noise insulation is a priority. Chatterblock® is classified as having High Flow Resistivity (noise absorption).

### Terra Lana Underfloor

A product designed specifically for underfloor. Consists of a layer of Terra Lana wool mix sandwiched between two layers of polyester. The Polyester provides rigidity which supports friction fitting. It also provides a tougher material through which staples can operate to ensure the insulation cannot be dislodged.

### Terra Lana Cylinder Wraps

An effective way of conserving energy and reducing electricity charges by insulating older (pre 1998) electric water heaters. A sharp knife and roll of tape are all that are required to install.

### Terra Lana Pipe Lagging

Thermal insulation for pipes in residential and commercial buildings. Reduces heat loss from hot water before it reaches the tap, shortens the time before the tap runs hot and protects pipes from frost.

Terra Lana - **the natural choice**
